

Happiness density markdown

Based upon the previous analysis, it's interesting to look at the countries and regions that may not fit into the general trend, as well as the main economies.

- selected regions: Western Europe, North America, Latin America and Caribbean, Eastern Asia
- got mean of happy score and GDP per capita for each country over the three years (2015-2017)
- built a density graph of regions

The density graph suggests that the distributions of regions is mostly non-uniform. Built a graph analyzing the GDP per capita and happiness score by country (labeled as such), colored by region.
